

You know where, we know how

A 50,000 cbm mining project to Marcona, Peru

After intensive route surveys, local site inspections and a detailed analysis and planning phase, 50,000 cbm of heavy lift and out of gauge steel structures were shipped by part and full charter from diverse ports in China to Marcona in Peru.

For on-carriage in Peru, many licences had to be arranged, obstacles to be dismantled, heavy fog and Paracas wind to be passed and civil- as well as police escorts to be organised.

Even cargo with a width of 8.75 metres had to be maneuvered across 9.3 metre width bridges.

The whole project was personally supervised by our local Peruvian and Chinese offices as well as Conceptum's German HQ's top management.
