

You know where, we know how

## Just in time before Brazilian highways were closed

Conceptum Logistics Hamburg, together and for our partners, operated 3 shipments for a Bolivian cement mill project.

The total volume was almost 1,000 cbm and the cargo originated from Germany as well as from Turkey.

Although the majority of the cargo for this project was running through Arica, this one was special as it was very time sensitive and therefore running through Brazil instead of via the Andes Mountains.

This was the reason why we shipped breakbulk onto container vessel, being way faster and due to weekly sailings, more flexible, especially for Turkey as origin.

The urgency regarding time was even challenged by knowing that the Brazilian highways will be closed in Dec/Jan for OOG-cargoes but thanks to smooth coordination and close communication between all parties, the operation was a success and cargo made it well in time.
