

You know where, we know how

Power Station Project

As cooperation between Conceptum Logistics Germany, USA and China, we handled a heat exchanger project for a natural gas-fired power station in the United States.

It contained 500 x 40' plus 12,000 frts of break bulk from worldwide origins via Norfolk to VA / USA.

Despite on-carriage in the US during the winter period between January to April all went fine.
